

Hydravent is a geocomposite subsurface drainage solution that's composed of a structured high-density polyethylene (HDPE) perforated core that is thermally bonded to a geotextile filter fabric.

Hydravent is strong and lightweight and efficiently channels methane, radon, and soil gases. It is the superior liner ventilation system of choice for ponds and lagoons, landfills, water treatment facilities, mining, petroleum facilities, fish hatcheries, brownfields, and subways.

Hydravent comes in widths of 6 and 12 inches with a standard length of 150 feet. It can be customized in a variety of lengths and widths upon request.

| PROPERTY                                 | TEST METHOD                  | UNIT OF MEASUREMENT | HV06-150 | HV12-150 |
|--|------------------------------|---------------------|----------|----------|
| Size                                     |                              | in x ft             | 6 x 150  | 12 X 150 |

<sup>1. 4</sup> oz fabric.

<sup>2.</sup> Based on 500 hours of testing.

<sup>3.</sup> Gradient of 0.1.

<sup>4.</sup> Values shown are in weaker principal direction. Minimum average roll values are calculated as the typical minus two standard deviations. Statistically, it yields a 97.7% degree of confidence that nay samples taken from quality assurance testing will exceed the value reported.

<sup>5.</sup> Modification was made to an existing ASTM test since a recognized test method had not been established for this type of product at time of testing.
